CloudFox Cheat Sheet

CloudFox

Source: <https://github.com>

CloudFox helps in gaining situational awareness in unfamiliar cloud environments. It is a command-line tool designed to find exploitable attack paths in cloud infrastructure. It automates the process of discovering cloud assets such as storage buckets, virtual instances, databases, and other services, making it easier to uncover potential security vulnerabilities and misconfigurations. CloudFox supports multiple cloud environments, including AWS, and Azure, allowing users to perform thorough scans and generate detailed reports on their cloud infrastructure.

Syntax	
<code>cloudfox aws --profile [profile-name] all-checks</code>	
Options	
<code>-p, --profile</code>	Specify the AWS profile to use.
<code>-v, --verbosity</code>	Set the level of verbosity for output (e.g., -v2).
<code>--tenant</code>	Specify the Azure tenant ID.
<code>--subscription</code>	Specify the Azure subscription ID.
<code>--organization</code>	Specify the AWS organization to enumerate.
<code>--resource-group</code>	Specify the Azure resource group.
<code>--region</code>	Specify the AWS region.
<code>--output</code>	Specify the output format (e.g., JSON, CSV).
<code>--config</code>	Provide a custom configuration file.

Note: Some options are specific to AWS and others to Azure.

CloudFox AWS Commands

Command	Description
<code>cloudfox aws -p cflab all-checks</code>	Runs almost all Cloudfox AWS commands with default options for the specified profile.
<code>cloudfox aws --profile cf-exec -v2 access-keys</code>	Maps all active access key IDs for all users in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 buckets</code>	Enumerates S3 buckets in the specified profile.
<code>cloudfox aws --profile cflab -v2 cloudformation</code>	Enumerates CloudFormation stacks in the specified profile.
<code>cloudfox aws --profile cflab -v2 codebuild</code>	Enumerates CodeBuild projects in the specified profile.
<code>cloudfox aws --profile cloudfoxable databases</code>	Enumerates databases (RDS, DynamoDB, etc.) in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 ecr</code>	Enumerates container repositories in the specified profile.
<code>cloudfox aws -p cflab ecs-tasks -v2</code>	Enumerates ECS tasks in the specified profile.
<code>cloudfox aws -p cflab eks -v2</code>	Enumerates EKS clusters in the specified profile.
<code>cloudfox aws -p cflab eni -v2</code>	Enumerates elastic network interfaces in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 endpoints</code>	Enumerates various service endpoints in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 env-vars</code>	Enumerates environment variables in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 filesystems</code>	Enumerates filesystems (EFS, FSx) in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 iam-simulator</code>	Runs multiple IAM simulator queries in the specified profile.
<code>cloudfox aws -p cflab instances -v2</code>	Enumerates EC2 instances in the specified profile.
<code>cloudfox aws --profile cf-exec -v2 inventory</code>	Provides an inventory of AWS resources in the specified profile.
<code>cloudfox aws -p cflab lambda -v2</code>	Enumerates Lambda functions in the specified profile.

cloudfox aws -p cflab network-ports -v2	Enumerates network ports in the specified profile.
cloudfox aws -p cloudfoxable orgs	Enumerates AWS Organizations information in the specified profile.
cloudfox aws --profile cf-exec -v2 outbound-assumed-roles	Lists outbound assumed roles in the specified profile.
cloudfox aws --profile cf-prod permissions -v2	Enumerates IAM permissions in the specified profile.
cloudfox aws -p cflab pmapper -v2	Runs Principal Mapper (pmapper) to enumerate permissions and relationships in the specified profile.
cloudfox aws --profile cf-exec -v2 principals	Enumerates IAM users and roles in the specified profile.
cloudfox aws --profile cflab -v2 ram	Enumerates shared resources in the specified profile.
cloudfox aws -p cloudfoxable resource-trusts	Enumerates resource-based trusts in the specified profile.
cloudfox aws -p cflab role-trusts -v2	Enumerates role trusts in the specified profile.
cloudfox aws --profile default route53 -v2	Enumerates Route53 resources in the specified profile.
cloudfox aws --profile cf-exec -v2 secrets	Enumerates secrets from SecretsManager and SSM Parameters in the specified profile.
cloudfox aws -p cflab -v2 sns	Enumerates Simple Notification Service (SNS) topics in the specified profile.
cloudfox aws -p cflab -v2 sqs	Enumerates Simple Queue Service (SQS) queues in the specified profile.
cloudfox aws --profile cflab -v2 tags	Enumerates tags for AWS resources in the specified profile.
cloudfox aws --profile cflab workloads	Enumerates workloads (EC2, ECS, Lambda, etc.) in the specified profile.

CloudFox Azure Commands

Command	Description
<code>./cloudfox azure -h</code>	Lists Azure commands
<code>./cloudfox azure whoami</code>	Displays information on the tenant, subscriptions and resource groups available to your current Azure CLI session
<code>./cloudfox azure vms --tenant 11111111-1111-1111-1111-11111111</code>	Lists all compute instances in the specified tenant.
<code>./cloudfox azure vms --subscription AAAAAAAAAA-AAAA-AAAA-AAAA-AAAAAAAA</code>	Lists all instances in the specified subscription.
<code>./cloudfox azure rbac --subscription AAAAAAAAAA-AAAA-AAAA-AAAA-AAAAAAAA</code>	Enumerates Role-Based Access Control (RBAC) roles and assignments in the specified subscription.
<code>./cloudfox azure rbac --tenant 11111111-1111-1111-1111-11111111</code>	Enumerates RBAC roles and assignments in the specified tenant.
<code>./cloudfox az storage --tenant 11111111-1111-1111-1111-11111111</code>	Lists all storage accounts in the specified tenant.
<code>./cloudfox az storage --subscription BBBB BBBB-BBBB-BBBB-BBBB-BBBBBBBB</code>	Lists all storage accounts in the specified subscription.
